## REPORT OF THE COMMITTEE OF VISITORS.

Epiphany Sessions, 1864.

---

The state of the building and the general health of the patients since the period of our last report has been in all respects satisfactory. The deaths have been rather more numerous than in preceding years, but not more so than we may reasonably expect from the number of old and chronic cases in the Asylum. We are endeavouring by degrees to improve the ventilation in the wards by the erection of air flues, and the substitution of wooden for asphalte floors, which has been recommended by the Commissioners in their Report.

By raising an additional story on each of the projecting wings we have made increased room for 40 patients, and the dormitories are the most airy and cheerful in the Asylum. As the cost of these alterations has been defrayed out of the balances of the former grant of £3000 and of the building and repair fund, we have not asked the Court of Quarter Sessions for any additional grant of money.

Notwithstanding, however, the increase of accommodation thus afforded, the wards are crowded, and supposing the average number of patients to remain the same we shall feel it necessary to consider some mode of relieving the pressure, more particularly on the female side. The Visiting Commissioners did not approve of that part of our plan for converting the carpenter's workshop into wards; but we may accomplish our end by extending the detached building lately erected for females, and by so doing remove all the female patients from the lodge on the male side. We do not, how-

ever, for the present, propose to ask for a grant of money for that purpose. Yet it must be borne in mind that probably the number of patients will not be at any time less than 650, including borough patients, but the average has lately been greater, owing in some measure, to the change in the Law, which removed the payment for maintenance from the parishes and placed it on the common fund of the unions.

We have contracted for the purchase of the land for which we obtained the sanction of the last Quarter Sessions, and we have to ask the Court for an order for payment of the purchase money, £737; but in order to effect all the improvements which we contemplate in the Asylum Farm, and to lay out the land to the greatest advantage, it is most desirable that we should purchase some other land which is situated in the centre of the farm. We ask the Court to grant £600 for that purpose.

At our first meeting for the past year we reduced the rate of maintenance from 8s. 9d. to 8s. 6d. per week, but we found it necessary to increase it to 9s. in the Midsummer Quarter. We cannot hold out any hope of a permanent reduction of that rate so long as meat and almost every article of consumption continues at its present price.

The balance of the building debt due last year was £18000, £1000 has since been paid off, reducing it to £17000.

The number of patients in the Asylum at the time of our report last year was 672, viz., 280 males and 392 females. The admissions during the year have been 174, viz., 87 males and 87 females—92 have been discharged, of whom 73 were recovered, and 77 have died.

At present there are now in the Asylum 674 patients, of whom 276 are males and 398 are females.

There has been only one change in our Officers, Dr. Coombes having resigned his office of Assistant Medical Officer of the Asylum, Mr. Thomas Lyle has been appointed to succeed him.

We desire to draw the attention of the Court to a circumstance which has arisen with regard to borough patients.

Up to the present time, the boroughs which are not con-

tributing to the county rate have been under contracts with the county for the care of their lunatics at the rate of 3s. 6d. per week per head beyond the general weekly charge for county patients. This extra sum has been considered as rent, the boroughs bearing no part of the expense of the erection and repair of the buildings.

The cost of maintenance of all lunatics being now by a recent Statute made chargeable on the common fund of the several unions, some of the boroughs which are included in unions are endeavouring to avail themselves of that circumstance by claiming to be part of a union, and so to have their lunatics kept at the same weekly charge as the county parishes. This is manifestly unjust towards the county parishes at whose expense the asylum has been erected and is kept in repair, and which pay equally with the boroughs to the common fund of the unions.

The Asylum Act is explicit and clear that such boroughs must either build an asylum for themselves, or contract with the Visitors of an existing asylum. And unless there be a contract the Act expressly declares that it shall not be lawful to send a borough patient to a county Asylum. We wish to call the especial attention of the County Magistrates to the law in this respect, in order that in the enquiry which they are directed to make before ordering the admission of a patient, if they find an evasion of the law attempted they may refuse to sign the order.

We see no reason why the present contracts should not continue, and the boroughs pay the extra 3s. 6d. per week out of the borough fund, the rest of the weekly charge being defrayed by the common fund of the unions. Should the borough authorities, however, decline to adopt this course, it will be for the County to consider the expediency of enforcing other provisions of the Lunacy Act, by annexing such boroughs to the county for asylum purposes, and so making them contributory, in common with the county parishes, to the expense of erecting, providing, and maintaining the asylum.

The detailed account of the expenditure for the past year

will be audited previously to the month of March next, as required by the Act of Parliament, and be printed with this report, and laid before the Court at the next Easter Sessions.

We beg leave to remind the Court that the Visitors for the ensuing year are to be appointed at these Sessions.

SAMUEL TREHAWKE KEKEWICH,  
*Chairman.*

*January 5th, 1864.*

# EIGHTEENTH ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT.

---

The Medical Superintendent has the honour to submit to the Committee of Visitors the Eighteenth Annual Report.

During the year 1863, 174 patients were admitted into the Asylum, of whom 87 were males, and 87 were females.

During the same period 92 patients were discharged, of whom 48 were males and 44 were females ; of these 73 were discharged recovered.

The deaths during the year have been 77 ; males, 42 ; females, 35.

The total number of patients under treatment during the year has been 843.

The annexed Table exhibits the changes which have occurred in the Asylum during the year.

		Males.	Females.	Total.
Number of Patients, 31st December, 1862		279	390	669
Admissions during the Year 1863	...	87	87	174
		<hr/>	<hr/>	<hr/>
Total during the year	...	366	477	843
Discharged	...                      ...	48	44	92
Died	...                      ...	42	35	77
		<hr/>	<hr/>	<hr/>
Remaining in the Asylum, Dec. 31st, 1863		276	398	674
		<hr/>	<hr/>	<hr/>
Average number resident during the year		269	393	662
		<hr/>	<hr/>	<hr/>
Number deemed curable on Dec. 31st, 1863		24	20	44

The number of patients recovered has been 42 per cent. on the admissions. The average per centage of recoveries since the opening of the Asylum has been 40.

The death rate has been 11·63 per cent. on the average number resident, and 9·1 per cent. on the total number under treatment during the year.

The average age at death was 48·7.

The average death rate since the opening of the Asylum has been 9 per cent.

A Table (No. 9) shewing the numerical results since the opening of the Asylum, with the percentages of the recoveries and deaths, has been added to the ordinary Tables in the Appendix to this Report.

The returns made by the Clerks to the Guardians in compliance with the 16 & 17 Vict., c. 97, shew that at the end of the year there were 1,201 "lunatics, idiots, and other persons of unsound mind," chargeable to the Poor Rates in the County of Devon. Of this number, 674 were in the County Asylum, 17 (from Plymouth) in other Asylums, 213 in workhouses, 297 residing with relatives and friends. The number of patients sent from Plymouth to another Asylum, arises from the fact that the existing contract between this Borough and the Visitors provides only for the reception of 40 patients, and that number has been exceeded. In the present crowded state of the Asylum the Plymouth authorities are obliged to seek elsewhere for accomodation for the overplus. It appears that 3·7 per cent. of the pauperism in the County is referable to insanity. The last Annual Report of the Poor Law Board states that the average of the pauperism ascribable to this cause through the kingdom is 3·62 per cent; the lunatics being 2·43 per cent., and the idiots 1·19 per cent.

An abstract of these returns has been made in Table No. 10 of the Appendix.

It will be seen by reference to the Obituary Table, that, as in former years, the chief causes of death have been general paralysis, phthisis, old age, and natural decay. An analysis of the table gives the following results: deaths from general paralysis, 13; general paralysis with phthisis, 6; phthisis, 23; old age and natural decay, 14; epilepsy, 5; tubercular pneumonia, 2; pneumonia, 1; exhaustion after acute melancholia, 2; bronchitis, 2; apoplexy, 1; cancer, 1; extravasation of urine, 1; diarrhœa, 2, tetanus following wounds of throat, 1.

The gradually increasing number of patients who die of phthisis, and thus augment the annual per centage of deaths,

suggest considerations of grave importance relative to the sanitary condition of the Institution as an hospital for the *cure* and *medical treatment* of the insane. Patients are admitted into the Asylum suffering from consumption in its various stages, many have it only in the latent or pretubercular form ; some have the disease fully developed, but in an early, and others in an advanced stage ; the latter cases generally run a rapid course : but in the majority of patients who die from phthisis, the seeds or germs of the disease have been developed in the Asylum.

A short digression may be made to shew the chief causes at work in bringing about this constitutional disorder, or "tubercular cachexia." The broadest fact established regarding the exciting cause of the tubercular deposit is, that deficient ventilation and the abeyance of the normal exercise of the lungs' function induce it. Thus, the domesticated animal is more liable to tubercular disease than the same animal in a wild state ; and most of our stalled animals are cut off by tuberculous affections. The same doctrine holds good when applied to man ; thus, in proportion as his habits are artificial, so is his tendency to phthisis. To these causes may be added an important one, namely, the depressing nature of long continued confinement, as shewn by the frequency of phthisis among prisoners who are confined for long terms of imprisonment. These causes must tell to a certain extent in all county asylums ; but in those overcrowded like our own, the influence exerted must be considerable, and contribute largely to the high rate of mortality prevailing in such institutions. In this Asylum the surface overcrowding, both in the day rooms and dormitories, has been a great source of anxiety. The superficial area for each bed in the associated dormitories varies from 33 to 44 feet, and the cubical area for each patient varies from 450 to 490 feet. The Commissioners of Lunacy suggest that the *minimum* superficial area should be 50 feet, and the minimum cubical area 600 feet. When it is considered that the bed alone occupies from 20 to 24 superficial feet, it will be apparent that the beds are in such close proximity as to favour the stagnation and con-

sequent vitiation of the air. The quantity suggested by the Commissioners appears a very moderate one when compared with what is considered necessary in the construction of modern hospitals, where the cubical space allotted to each patient varies from 1,500 to 2,500 cubical feet.

The bad influence exerted by defective hygiene thus produced by over-crowding, shews itself by the general feeling of *malaise*, languor, restlessness, and frequent excitement among the patients, and consequently it tends not only to retard the recovery of acute and curable cases, but also occasionally to transfer them to the incurable class, who are domiciled in the Asylum for life. The inevitable deterioration of the general health from this cause, among the class of chronic and incurable cases, is such, that out-door exercise, a liberal diet, and physic, can only counteract to a limited extent.

There are a considerable number of patients in the Asylum at the present time suffering from phthisis, and many of these will swell the bill of mortality during the coming year.

The frequent association of phthisis with the *later* stages of general paralysis has, after much consideration and a careful study of the various phases of this latter disease, induced your Superintendent to arrive at the conclusion that an intimate pathological relationship exists between the one and the other. This pathological relationship has not been noticed by authors who have written on general paralysis, and the facts and deductions on which this opinion is based are of too technical a nature to embody in a general report; but a closer investigation of this subject may, at some future time, furnish matter of sufficient interest to those who are engaged in the treatment of insanity and the diseases with which it is associated.

During the year a death has occurred from suicide. This is the fifth case of the kind which has happened since the opening of the Asylum, and gives an average of one suicide in about three years and a half, or one death from this cause in every 527 patients. This patient, J. T., No. 2285, had been two years a patient in the Asylum, and for 14 months previous to his death had mentally improved, and assisted in the kitchen at the male new house; during the whole of this

time he shewed no suicidal tendency, neither was it suspected. On the 18th of April he secreted a knife in the kitchen, and went to the closet where he inflicted four slight wounds on the front and sides of the neck; the windpipe and large bloodvessels of the neck were uninjured; the loss of blood was very slight; and from the nature and character of the injuries received, a favourable recovery might have been anticipated. The man was subsequently much agitated and dejected in mind in consequence of the attempt made at self-destruction, and this agitation continued until his death. On the third day after the infliction of the injury, symptoms of lock-jaw appeared; these symptoms increased in severity, the tetanic spasms became more frequent and violent, and death ensued on the fifth day after the accident, from exhaustion of the nervous system, loss of sleep, and inability to swallow food. Tetanus may be caused by wounds of every description, however slight; but a case similar to the present is exceedingly rare, and of painful interest. The lock-jaw in this case arose not so much from the nature of the wounds inflicted, as from the peculiar nervous excitement of the patient.

A large number of patients have been admitted during the year with strong suicidal propensities, and several of these patients had wounds of the throat on admission; not one of these have died, and several have recovered and obtained their discharge. As an example of the anxiety and constant attention and watchfulness necessitated in the treatment of these suicidal cases, it may be mentioned that once during the year it was requisite to have a special attendant, or rather relays of attendants, watching day and night for six weeks three patients with determinedly suicidal propensities; one of these had a severe wound of the throat on admission, the second and third had suicidal melancholia, and seven relatives of one of them had committed suicide.

The cunning and determination shown by this class of patients in their endeavours to carry their various plans into execution are extreme, and at times eludes the greatest vigilance. One of the patients above referred to, after resorting to various methods to obtain a cord to strangle herself,

quietly and carefully picked out a portion of the seam of a strong canvas sheet which was covering her, and tied it round her neck ; she did this while she was feigning asleep, with her head under the bed clothes, and there is but little doubt that had there been no nurse watching by her at the time she would have effected her purpose. All patients with marked suicidal propensities are placed at night either in an associated dormitory next to a safe and comparatively watchful patient, or in a single room in strong ticking sheets ; but the above illustration shews that too much reliance cannot always be placed even on this necessary precaution. It is a matter for congratulation, that, owing to the vigilance of the attendants, the wily and cunning projects of these patients do not oftener succeed.

During the long continued drought in the past summer, much inconvenience was occasioned by the inadequate water supply for the daily requirements of the Asylum. It is of the utmost importance that there should be a constant and ample supply of good water both for general and sanitary purposes, as well as a provision in case of fire. The consumption of water for an asylum, including, besides patients, officers and servants, is on an average of 25 gallons for each person per day, exclusive of rain water. Thus, in this asylum, a minimum supply of 18,500 gallons of water is necessary, but during the drought in August last, the Asylum well did not yield more than 11,500 gallons per diem, or about two thirds of the quantity necessary. This may, at first sight, appear extravagant, but when the quantity consumed in the laundry, (where more than 7,000 pieces of linen are washed weekly,) kitchens, brewhouse, baths, washing the floors, water closets, &c., is duly estimated, it will be seen that an enormous supply is necessary to keep a large asylum in a clean and healthy condition.

It is satisfactory to your Superintendent to know that the important question of the water supply is under the consideration of the Visitors.

Since the additions made to the farm, during the past year a greater number of patients have been employed in out-door

pursuits, with much benefit to themselves, and advantage to the Asylum. The profits arising therefrom have been £543 during the past year, and the results would have been still more favourable, but for the large mortality amongst the pigs caused by two epidemics of pleuro-pneumonia. When the land recently purchased is brought into cultivation, the profits on the farm will be considerably increased, and the expenditure on certain articles of farm produce will be comparatively little. The expenditure during the past year for milk, butter, cheese, potatoes, &c., has been £1120. It is hoped that nearly the whole of these articles of consumption will, in the course of a few years, be raised on the Asylum farm.

Among the additions and improvements made during the past year may be mentioned as first in importance, the new dormitories, raised over the cottages and connecting galleries, furnished with every accommodation for infirmaries, containing twenty beds on either side, a want long felt in this Asylum, and which, for light, air, comfort, and cheerful aspect, leave nothing to be desired. Second. Most of the old baths have been replaced by others of a superior description. Third. The objectionable asphalte flooring of one of the galleries has been removed, and a wooden one has been laid in its stead. It is hoped that the whole of the asphalte flooring will be treated in a similar manner. Fourth. A considerable amount of papering, painting, and colouring of dormitories has materially added to the comfort and cheerful appearance of various parts of the Asylum. Independently of these beneficial alterations, a number of minor improvements have taken place, which, it is to be hoped, has marked the year gone by as one of progress.

In conclusion, your Superintendent has much pleasure in recording the zeal and efficiency displayed by the different officers in their various departments, and at the same time he begs warmly to thank the Visitors for the kind and cordial support afforded him in the performance of his duties.

*(Signed)*
